Multimedia Research and Documentation of Oral Genres in Africa Daniela Merolla 2012 This book approaches a central concern of oral literature studies worldwide, with a special focus on Africa: how to deal with oral genres in a world where new technologies have become available to more and more people? As the book asserts, what is new is that the spotlight is directed towards (old and new) "interlocutors" who cooperate in the making of technologized oral genres in an increasingly technologized world. Their interactions affect the performance, as well as research - their roles and positions raise methodological and ethical questions particularly when local/national identities and commercial interests are at stake. Guidance on Inventory and Documentation of the Cultural Heritage John Bold 2009-01-01 Improved heritage management and the inclusion of heritage in planning and sustainable development processes necessitate inventory and documentation. More than mere scientific tools recommended in international agreements, inventory and documentation play a strategic role. The complexity of the heritage items that now have to be inventoried and their interaction with our everyday living environment require the clear definition and harmonisation of practices at the European level. Through its work in the 1960s, the Council of Europe helped to lay the methodological bases for inventorining architectural, archaeological and movable heritage. The efforts to systematise the process came in answer to the broadening meaning of heritage, and today new considerations lead us to address such notions as heritage groups. The guidelines proposed in this book reflect the work done so far and provide a basis for future research. It is part of a series produced under the Technical Co-operation and Assistance Programme to present the experience derived from the projects implemented by the Council of Europe.

Understanding Pedagogic Documentation in Early Childhood Education Joao Formosinho 2019-04-30 Much more than simply recording events, pedagogical documentation is a revolutionary educational approach that enables practitioners to capture and understand the ways in which children learn and think. Exploring the use of pedagogical documentation across five different cultures, this book offers a unique insight into the conditions and methods through which pedagogical documentation might become an effective means of connecting teaching and learning. By drawing on theory, research-based evidence and practice, Understanding Pedagogic Documentation in Early Childhood Education reveals pedagogic documentation as an instigator for critical reflection on practice, for the creation of new pedagogical approaches and improvements in quality. Observing and documenting the lived educational experience of children and practitioners is emphasised as a means of acknowledging their voice and rights, of revealing their knowledge, their competences, their attitudes and dispositions to learning. Offering contextualised approaches and considering the challenges involved in observing and documenting day-to-day practice in early childhood settings, chapters encourage professionals to reflect and recognise the value of documentation for children, staff members and the wider community. Making a crucial contribution to the understanding of how pedagogic documentation can be used in practice, Understanding Pedagogic Documentation in Early Childhood Education offers researchers, students, policy-makers and professionals a comprehensive, and multicultural perspective on pedagogical documentation.

Language Documentation Lenore A. Grenoble 2010 "Language documentation," also often called "documentary linguistics," is a relatively new subfield in linguistics which has emerged in part as a response to the pressing need for describing, collecting, and archiving material on the increasing number of endangered languages. The present book details the most recent developments in this rapidly developing field with papers written by linguists primarily based in academic institutions in North America, although many conduct their fieldwork elsewhere. The articles in this volume position papers and case studies focus on some of the most critical issues in the field. These include (1) the nature of contributions to linguistic theory and method provided by documentary linguistics, including the content appropriate for documentation; (2) the impact and demands of technology in documentation; (3) matters of practice in collaborations among linguists and communities, and in the necessary training of students and community members to conduct documentation activities; and (4) the ethical issues involved in documentary linguistics.

Documentation, Disappearance and the Representation of Live Performance M. Reason 2006-09-22 The documentation of practice is one of the principle concerns of performance studies. Focusing on contemporary performance practice and with emphasis on the transformative impact of video, photography and writing, this book explores the ideological, practical, and representational implications of knowing performance through its documentations.

Documenting Endangered Languages Geoffrey Haig 2012-01-01 The rapid decline in the world’s linguistic diversity has prompted the emergence of documentary linguistics. While documentary linguistics aims
primarily at creating a durable, accessible and comprehensive record of languages, it has also been a driving force in developing language annotation and analysis software, archiving architecture, improved fieldwork methodologies, and new standards in data accountability and accessibility. More recently, researchers have begun to recognize the immense potential available in the archived data as a source for linguistic analysis, so that the field has become of increasing importance for typologists, but also for neighbouring disciplines. The present volume contains contributions by practitioners of language documentation, most of whom have been involved in the Volkswagen Foundation's DoBeEs programme (Dokumentation Bedrohter Sprachen). The topics covered in the volume reflect a field that has matured over the last decade and includes both retrospective accounts as well as those that address new challenges: linguistic annotation practice, fieldwork and interaction with speech communities, developments and challenges in archiving digital data, multimedia lexicon applications, corpora from endangered languages as a source for primary-data typology, as well as specific areas of linguistic analysis that are raised in documentary linguistics.

**What is Documentation?**
Suzanne Briet 2006 Born in Paris in 1894, Suzanne Briet was active nationally and internationally in the development of what was then known as Documentation but would now be called Information Management or Information Science. In 1931, she participated in founding the Union Française des Organismes de Documentation (UFDO), the French analogue of the American Documentation Institute now called the American Society for Information Science and Technology. She was a leader in developing professional education for this new specialty and designed a plan for what would have been the first school of Documentation / Information Science worldwide, had it been established. In 1951, when a school of information science was finally established, Briet was the founding Director of Studies. She became Vice President of the International Federation for Documentation (FID) and acquired the nickname "Madame Documentation." What is Documentation? relates this fascinating story and includes the first English translation of Briet's remarkable manifesto on the nature of documentation, Qu'est-ce que la documentation? (Paris: EDIT, 1951). A pamphlet of 48 pages, Part I sought to push the boundaries of the field: "Beyond texts to include any material form of evidence ("1 is a living animal a document?" she asked). Part II argued that a new and distinct profession was emerging. Part III urged the societal need for new and active documentary services. This tract remains significant due to its continuing relevance towards understanding the nature, scope, and societal impacts of documents and documentation. Briet's modernist perspective, combined with semiotics, deserves attention now because it offers a sturdy and insightful alternative to the scientific, positivist view that has so dominated information science and which is increasingly questioned.
